

About GL-TURBO®

GL-TURBO® is a multinational company headquartered in Boston, U.S.A., with over 20 years of expertise in environmental protection and energy-efficient technologies. Guided by the vision to lead and advance sustainable environmental solutions, GL-TURBO® is trusted by customers worldwide.

The GL-TURBO® single-stage high-speed centrifugal blowers are widely applied in municipal and industrial wastewater treatment, power generation, chemical processing, pharmaceuticals, and food and beverage manufacturing. To date, GL-TURBO® solutions have been deployed in more than 200 wastewater treatment projects across over 20 major countries, including the United States, Canada, Singapore, China, and India, earning a strong global reputation for safety, reliability, and efficiency.

Integrating state-of-art impeller design, aerodynamic inlet and outlet guide vanes, tilting-pad bearings, and intelligent control software, GL-TURBO® blowers provide constant pressure and stepless airflow control from 45% to 100%, significantly expanding the high-efficiency operating range. Building on this platform, GL-TURBO® developed the GPAC® (GL-TURBO Precision Aeration Control) system, proven in long-term operation to maintain dissolved oxygen within ± 0.5 mg/L of setpoints, with control accuracy exceeding 95% and substantial energy savings.

In 2022, GL-TURBO® acquired the assets of U.S.-based BioChem Technology, Inc. (BCT), further strengthening our leadership in precision aeration control. With operations in Wuxi, Boston, Houston, Leipzig, Copenhagen, and Bangalore, GL-TURBO® is one of the largest and the best of its kind in delivering integrated R&D, manufacturing, and lifecycle services worldwide.

GL-TURBO® - Applying advanced technology for a more harmonious coexistence of human and the environment.
